

Reynolds Soil Technologies (RST) is a multi-award winning company that specialises in providing comprehensive, environmentally friendly **dust**, **earth** and **water** solutions to the mining, construction, civil and agricultural industries globally.

RST have experienced unprecedented growth and recognition for innovative products, technical excellence and service globally in the highly specialist fields of:

- **Dust: Total Management** - dust suppression products and equipment, dust modelling and dust monitoring
- **Earth: Road Stabilisation** - increased strengths, reduced permeability and reduced material cost
- **Water: Sediment Treatment** - prevention of sediment movement into water flows and clarify turbid 'dirty' water
- **Erosion Control** - soil erosion, weathering erosion and erosion deposition
- **Agriculture & Specialty** - farming, gardens, vineyards, sporting arenas and water runoff

RST identifies the true nature of a problem and develops a solution to achieve optimal outcomes utilising products and systems tailored for each individual project.

All RST products are supported by the company's Technical Services Division, who not only ensure the most suitable products are selected, but are also applied correctly on an ongoing basis.

All of **RST's** programs and products are independently tested and evaluated by qualified engineers

RST ensures their solutions are:

- **Cost effective**
- **Active in environment working conditions**
- **Environmentally safe in nature**
- **Utilising water saving technologies**

RST'S SEVEN STEP SOLUTION

- **RST** will evaluate your problem
- Develop a solution
- Recommend, communicate & agree on a solution
- Design & install mechanical systems
- Implement the solution
- Monitor the results
- Report, validate & recommend further strategies
