

TURBOSEED

STIMULATES GERMINATION UNDER HARSH CONDITIONS

TurboSeed is formulated with bio stimulants to encourage germination under harsh conditions and a range of nutrients essential for early establishment and vigorous plant growth.

DESCRIPTION

TurboSeed contains organic compounds such as humic acids, seaweeds and soil microbiology to improve the soil structure and moisture handling ability.

In addition, TurboSeed includes nitrogen, phosphorus and potassium together with trace elements plus organic compounds provide a complete fertilizer package for the establishment of a range of grasses and plants.

TurboSeed has been developed to stimulate germination making it an ideal inclusion when working in harsh environments.

APPLICATION

TurboSeed is a soil or in furrow applied starter fertilizer. It is designed to provide the best possible early nutrition for the plants as they develop. TurboSeed contains a unique humic ferment which stimulates soil biology and root development. Both humic and fulvic acids hold nutrients in the soil to increase uptake and plant availability.

OTHER APPLICATION

Application rates vary depending on crop, soil type, level of nutrient deficiency etc. Can be mixed with and pesticides. A check for compatibility prior to tank mixing is required.

Keep out of reach of children. Shake well before use.
