

FLOCKIT

WATER CLARIFIER AND SEDIMENT CONTROL

- > Easy to use
- > Cleans dirty water - fast
- > Can be applied to the ground to stop sediment washing into water courses
- > Applicable to small to very large projects
- > Non-toxic to fish and aquatic life
- > Tailor made to each application to achieve maximum results
- > Used where no power or dosing equipment is available and suitable for remote applications

APPLICATION

FLOCKIT blocks are secured in the water flow/stream prior to settling ponds and discharge ponds.

FLOCKIT granules and liquid give other options for applications that may better suit the project.

DESCRIPTION

FLOCKIT is flocculant supplied in the form of a solid dissolving block, a granule or liquid.

Ideal applications for FLOCKIT are:

- Clarification of site discharge water
- Clarification of drainage from construction sites
- Clarification of ponds & dams
- Recycling of water used in drilling and laser boring
- Stopping sediment washing into water courses
- Settling effluent from small industrial plants
- Settling sediment fines in furrow irrigation to reduce erosion
- Treatment of underground mine sedimentation problems
- Clearing runoff water from stockyards & docks
- Underground water clarification for dewatering
- Cleaning concrete cutting sludge
