

PRIME X

A 'PRIMER' FOR RT4, RT5, SEDIBIND & TGC SUPERSKIN VENEERING PRODUCTS

BENEFITS

- A 'Primer' to RST's Superskin Veneering products
- Used as a pre-treatment additive in the mixing of the Veneering solution
- Improves the penetration of the Veneering product allowing for better product distribution
- Applied at very low dosage rates
- Fast, instant results

DESCRIPTION

PRIME X is a concentrated blend of performance enhancing additives used as a 'Primer' for RST's Superskin Veneering products. Used as a pre-treatment additive to RT4, RT5, Sedibind and TGC products, the addition of Prime X will increase the veneer treatment products initial reaction time for the solution whilst improving the overall penetration performance of the product.

- Accelerates the product mixing process
- Breaks the surface tension created between the veneering solution sprayed onto the treatment areas
- Allows the veneering solutions sprayed on the surface to penetrate more and spread more readily
- 100% Environmentally Safe

APPLICATION

PRIME X is mixed into the application water first. Then the Superskin Veneering product is added into the second half of the fill at the recommended dosage rate.

PRIME X recommended dosage is 0.1% in the application solution.

HEALTH, SAFETY, ENVIRONMENT AND THE COMMUNITY (HSEC)

RST strives, through a process of continuous improvement, to fully integrate health, safety, environmental and community (HSEC) consciousness into all aspects of its activities
